

supamoss

The Natural Moss Alternative

These “Natural Moss Alternative” basket liners, with the look of natural green moss, retain their appearance throughout the season. This unique product is made in England from natural reclaimed fibres which are environmentally friendly, renewable resources. The naturally dyed fibres are reinforced with a flexible lining material which provides excellent water retention properties while allowing for sufficient drainage. This versatile all in one liner holds its shape in large containers, lends itself to easy side planting and is suitable for any type of hanging basket or patio planter.

“The best all-in-one basket liner I know. It’s quick, clean, easy to use and immediately looks good. We produce in excess of 5000 baskets each season for a number of local authorities. Supamoss has been a firm favourite for us and our customers for a number of years. A great product that is value for money from a company that prides itself on customer service.”

D. Bradbrook, Ravensworth Nursery

"After more than 12 years of experimenting with hanging baskets, I have found Supamoss to be the best basket liner for our city's hanging basket program. It is easy to plant through, looks great until the plants fill in and most importantly, conserves water throughout the summer months."

C. Dwayne Jones, Horticulturist and Superintendent of Parks & Horticulture for the City of Waynesboro, Virginia.
